

PQWT-LDC Multi Sensors Outdoor Large Area Underground Pipeline Water Leak Detection Device

Customized support:	OEM, Software reengineering
Place of Origin:	China
Brand Name:	PQWT
Model Number:	LDC-5P
Product name:	PQWT-LDC 5P Outdoor Movable Water Leak Detection Trolley
Application:	Pressure pipe, heating pipe, fire pipe and etc.
Power supply:	Battery
Display:	Touch Screen Display
Frequency range:	1-20KHZ
Temperature range:	-20°C~+50°C
Number of sensors:	5
Sensor size:	Dia. 65mm, 120mm*48mm
Trolley size:	116cm*64cm*123cm

PQWT-LDC Series Water Leakage Detection Trolley is a high-precision and high-efficiency pressure pipe network leakage detection equipment newly developed by Puqi Institute. It conducts rapid water leakage detection and inspection work for large areas of water supply, heating, fire and other pipelines under the condition of known or unknown pipeline distribution. The equipment uses B-P algorithm technology, equipped with 20 wireless monitoring sensors to collect data from different areas, and transmits the data to the central controller through relays in a wireless way for efficient and rapid analysis, so as to locate water leakage points automatically. At the same time, It can also live record in real-time and all collected sound can be saved. These functions make the inspection work more convenient. Puqi LDC Series Water Leakage Detection Trolley has been authorized by 13 invention patents and utility model patents. (Declaration: patented product, counterfeiting not allowed.)
